1 / 1
分数

1.
What is a Convolution?

- A technique to make images bigger
- A technique to filter out unwanted images
- A technique to isolate features in images

正确

- A technique to make images smaller

---

1 / 1
分数

2.
What is a Pooling?

- A technique to make images sharper
- A technique to combine pictures
- A technique to reduce the information in an image while maintaining features

正确

- A technique to isolate features in images

---

6/6 分 (100.00%)

How do Convolutions improve image recognition?

- They make the image smaller
- They make the image clearer
- They isolate features in images

正确

- They make processing of images faster

1 / 1
分数

4.
After passing a 3x3 filter over a 28x28 image, how big will the output be?

- 28x28
- 31x31
- 25x25
- 26x26

正确

1 / 1
分数

5.
After max pooling a 26x26 image with a 2x2 filter, how big will the output be?

- 13x13

正确

- 26x26
- 28x28
- 56x56

Applying Convolutions on top of our Deep neural network will make training:

- [x] It depends on many factors. It might make your training faster or slower, and a poorly designed Convolutional layer may even be less efficient than a plain DNN!

正确

- [ ] Faster
- [ ] Slower
- [ ] Stay the same
